Before the FEDERAL COMMUNICATIONS COMMISSION Washington, D.C.

Great Pla	ins Communications	FCC - MAIL ROUN	
1	DIRECT CASE	RECEIVE	٠,
800 Data Base Access Tariffs and the 800 Service Management System Tariff		C Docket No. 93-129	
In the Matter of)	/	/

Introduction

In this Direct Case, Great Plains Communications, Inc., complies with the FCC's *Order Designating Issues for Investigation* in CC Docket No. 93-129, released July 19, 1993 (with response date modified in an *Order* released August 5, 1993). Specifically, Great Plains herein responds to the questions posed in Appendix B of the July 19 *Order*.

Great Plains responds as a rate of return carrier that filed rates that became effective May 1, 1993 for the provision of carrier identification and vertical services for 800 Data Base Service. Great Plains does not own a Service Control Point (SCP), nor does it own the Service Switching Point (SSP) equipment needed to launch a query. Rather, it participates in the provision of 800 Data Base Services by passing 800 Service calls that originate in its territory to one of two connecting local exchange carriers. Rates charged by Great Plains for these services are based on the charged assessed the company by the two connecting exchange carriers.

Responses to Section III. Demand

1. For 800 data base service, provide the demand level used in your cost calculations.

No. of Copies rec'd DHList A B C D E

Answer: The interstate demand level used was 3,206,904 queries.

2. If in calculating your costs, you lowered your demand estimate to compensate for unbillable queries, thereby increasing costs, provide the percent by which you lowered

demand.

Answer: The demand estimate was lowered by 1.6753 percent.

Responses to Section IV. Other

3. Explain and justify your rationale for the factor used to decrease demand for your ratemaking calculations.

Answer: The unbillable query percentage adjustment is required because Great Plains does not send a carrier access bill to all interexchange carriers that originate 800 Service traffic in the company's exchanges. Great Plains must rely on its connecting carriers for identification of the interexchange carriers involved, and there are instances where identification is not possible. There are also instances where the cost of rendering a CABS bill would exceed the revenue that would be forthcoming. Consequently, an adjustment is necessary to reflect 800 Service messages originated by those interexchange carriers that would not be billed by Great Plains.

4. Provide the name of the SCP provider for your query service.

Answer: 800 Service calls originating in Great Plains' exchange are routed to SCPs provided by either US WEST or Lincoln Telephone & Telegraph (LT&T).

5. Provide the per query rate on which your rates were based.

Answer:		US WEST	LT&T
	Carrier Identification	\$.003500	\$.01300
	POTS Translation	\$.003665	\$.003665
	Call Handling & Destination	\$.000694	\$.000694

6. Did your SCP provider(s) revise rates since your original rate calculations?

Answer: LT&T has revised its rates, but not US WEST.

7. If your SCP provider(s) revised rates, have you revised your rates to reflect the change in your costs?

Answer: As a rate of return carrier that files access rates on a prospective basis, Great Plains files mid-course corrections with the Commission when underlying cost or demand projections prove to be significantly inaccurate. On the other hand, changes in underlying costs of operations that do not have a material effect on tariffed rates or earned rate of return serve as the basis for the next prospective filing but do not necessarily prompt an immediate filing. The revisions to the charges assessed by LT&T fall into the latter category.

8. If you use two or more SCP providers and develop a composite query cost, explain how the composite is calculated for inclusion in your rates.

Answer: The 800 Service queries were identified by SCP provider and the respective charges to Great Plains were applied to the demand for each SCP.

9. If you use a transport provider, provide the name and per query rate assessed by that provider.

Answer: Great Plains does not use a transport provider.

10. Provide worksheets showing all relevant data and calculations.

Answer: Two schedules are attached. Schedule A summarizes the development of all three rates. Schedule B summarizes demand calculations, which are based on the annualization of a study of traffic for the month of January 1993. Also enclosed is the "Information Request" spreadsheet, with demand estimates noted. Great Plains has no investment related to the services in question.

11. Include and justify any other costs incurred to provide 800 service.

Answer: The only other costs included in Great Plains rates are those associated with changing our Carrier Access Billing system to allow billing for 800 Service queries. Those cost are identified in Schedule A and reflect estimated hours multiplied by appropriate loaded labor rates.

S. Michael Jensen

Vice-President, General Manager

Great Plains Communications, Inc.
